

Open spaces The Horizontal Sliding Wall System SF55

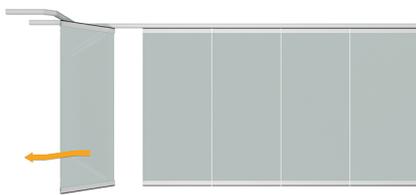

Large buildings and wide shop fronts can be closed and reopened conveniently and barrier-free across the entire area with the SUNFLEX horizontal sliding wall systems. The individual glass panels are not connected to each other. Thus, they can be parked in a space-saving manner not only at the ends, but in any individual position. Since the system does not require any bottom track at all, no connections are necessary in the floor area.

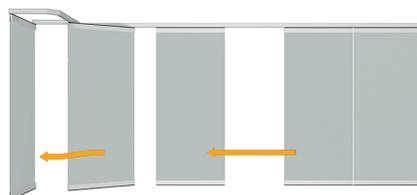

Handling

Turning of the opening panel

Easy sliding and turning of the individual elements

Large opening space when elements are opened

System information

- Elements are parked in a parking bay when opened
- The panel partition and the design of the parking bay can be individualised
